

Downloading Data

Exporting data is quick and easy using GFD Finaeon.

Update thousands of files daily or choose a few for a special project, GFD offers you the flexibility of choice.

On-Demand Downloading

If you need quick and easy access to a handful of files, you can download directly from our website. You can use our search engine to find the files you need, get a description of the data, generate graphs, or export. Workbooks may also be created.

Global Financial Data API

Version 2.1.0

Global Financial Data offers several API options to access and download our data, both as files and as JSON data. The JSON data API methods are identified and listed below. API access and use is controlled via a subscription to Global Financial Data. If you do not have a subscription to GFD, please [contact us](#) to inquire about terms of access.

If you're new to GFD, we recommend that you check out our [help](#) videos, which have been posted to YouTube for convenience. These videos introduce you to GFD, our platform, and how our data is categorized and organized.

Version 2.0.0 introduces token-based authentication.

Version 2.1.0 introduces the Fundamentals API.

Login

Returns a token to be submitted with all calls to the API. The token expires after 10 minutes.

Search

Searches the entire scope of GFD's data regardless of whether or not the user has access to the price data. Included in the return data is information as to whether or not the user can access the returned data fields.

Multi Series with Price Data

Data returned includes series metadata and price data.

Fundamentals

Returns fundamental series data by symbol.

Downloading Data

Application Programming Interface (API)

GFD's API is recommended for analysts who require large amounts of data for broad research needs. It enables researchers to study the interaction between different data series, sectors, and genres of data. You can choose economic data, fixed income, equities, exchange rates and commodities to enhance your analysis of different asset classes. Simply plug your list of files into the API and download. You can make special requests for formatting the data, adjusting for corporate actions, inflation, currency or other variables to fit your needs. Our API supports R and Python so you can download your data directly to your application.
