

GFDDatabase

Our core data becomes alternative data due it's unparalleled history. Access over 100,000 complete, unabridged data series to analyze economic and financial trends from every country in the world.

This Macroversal Database™ extends further than any other single digital resource, and remains the most referenced source of its kind.

GFD provides solutions for those seeking macro level financial data covering a multitude of asset classes for the United States, the United Kingdom and the world. In addition to its proprietary indices and data extensions, GFD provides access to the core economic and market data that analysts rely upon for day-to-day trading decisions. We provide daily market data that reflects these changes so traders can analyze market-driven variables.

Our core data becomes alternative data due it's unparalleled history. GFD goes beyond what other data providers offer by adding decades and even centuries of data extensions to its core data. Customers use GFD not only for our alternative historical data but for our core data which enable users to study economic and data trends from every country in the world.

In addition to our vast collection proprietary data sets, we offer data compiled from Eurostat, the World Bank, the Federal Reserve and other government sources. Global Financial Data distinguishes itself from other data providers in extending these core data series further back than any other source.
